### **OptiAir™ - Fleetguard's new and innovative Air intake System for Medium and Heavy-Duty Diesel applications!**

Fleetguard, a global leading manufacturer of filtration, exhaust, chemicals and cooling system products for all diesel applications, has launched OptiAir™. OptiAir™ is a complete line of patented plastic Air intake systems which address the key requirements of original equipment manufacturers today.

With its unique design, Fleetguard's new OptiAir™ system significantly outperforms conventional Radial Seal Air intake Designs by delivering higher flows, lower restriction and offering longer filter life. The current OptiAir™ range includes seven systems from 4" to 13" Air Housings, covering Air Flow rates up to 31.15m<sup>3</sup>/min.

A key benefit of Fleetguard's two-stage plastic Air Housing Design is the compact size featuring a Twist Lock™ cover offering multiple latch positions. The increased media and outlet area of the OptiAir™ filter elements increase the air flow thereby significantly reducing restriction which ensures maximum engine performance.

All OptiAir™ systems are available with or without secondary elements – the 4", 5", 6" and 8" are also available as both straight and rotatable 90° elbow outlet version.
