Press Information

Fleetguard and Davco Technology Form Alliance to offer broadest diesel Fuel Heater/Water Separator/Filter Product line!

Fleetguard Inc., the global filtration, exhaust, coolant and chemical specialist for diesel-powered equipment, and Davco Technology, L.L.C., one of North America's leading suppliers of remote mount fuel heater/water separators, have allied to supply highly specialized fuel filtration systems to the global marketplace. The combined product offerings create the broadest diesel fuel heater/water separation/fuel filtration product line-up in the industry. In addition, Davco's REN[™] industrial product line of automatic oil replenishment systems, slow flow meters and fluid level switches are included in the expanded product line.

The agreement calls for the conversion of Davco's fuel heater/water separator/filter product line filtration media to Fleetguard's proprietary StrataPore[™] media. Patented StrataPore[™] is a synthetic, multi-layered media developed by Fleetguard in the 1990s that adjusts filtration efficiency to meet specific application needs through its porous, polymer layers. StrataPore[™] has won numerous industry awards for its innovative performance.

The agreement provides for the expansion of Davco's Diesel Pro[™], Fuel Pro[™], and SeaPro[™] series of remote mount fuel heater/water separation systems to more on- and off-highway, industrial, construction and marine applications, so as to serve a more global customer base.
