

The Fleetguard Advantage.

Fleetguard filters are specifically designed to meet the performance characteristics and needs of each engine as specified by the manufacturer. This ensures filtration performance is correct for your engine's requirements and you can rest knowing your engine is protected from contamination that causes damage to critical components.

Nothing Guards Like Fleetguard.

Fleetguard filters provide superior protection for your Detroit Diesel engines so you can depend on your equipment to get the job done every time.

You can find Fleetguard products at over 33,000 retail locations worldwide. For the one nearest you, go to cumminsfiltration.com. In North America, customers who want more information can call 1-800-22FILTER (1-800-223-4583).

The Best Warranty in the Business

The Cummins Filtration Warranty extends to our entire line of products, ensuring the same promise of performance and coverage beyond the competition. Visit cumminsfiltration.com to learn more about the competitive benefits of the Cummins Filtration Warranty.

Fleetguard® Filtration Solutions

For DD13, DD15 & DD16
Detroit Diesel™ Engines
Model Years 2007-2013

Filtration

©2015 Cummins Filtration
Printed in the United States

Premium Protection. **Optimum** Performance.

Superior Fuel Filtration

Features
NanoNet®
6X
more water separation
than competitors

3X
better particle
removal and retention
than competitors

Part Number: FK48556

Today's diesel engines use High Pressure Common Rail (HPCR) fuel systems, which are more susceptible to contaminants in fuel because of smaller component clearances and extremely high pressures. The FK48556 not only has better efficiency, but protects against the release of particles during engine vibration and fuel surge, leading to longer fuel injection equipment life and lower total cost of ownership.

*FK48555 is available without the prescreen filter

Low Flow Lube Filtration

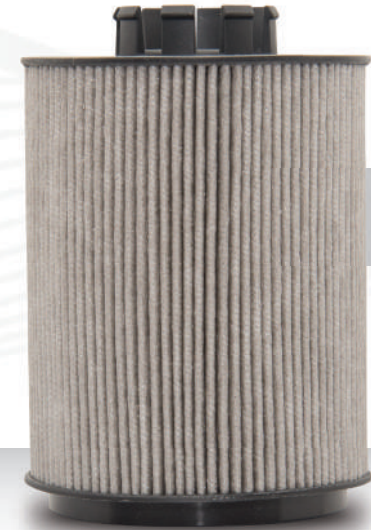

A locking cap feature that allows for a hassle free oil change

Includes a patented bypass that allows for downstream flow

Part Number: LF17511

Flow restriction greatly affects engine performance, especially in cold climate conditions where increased oil viscosity can starve engine components of the oil they need. The LF17511 ensures a low flow restriction, even under cold operating conditions, to ensure your engine performs as intended.

Powerful Water Filtration

WF2187 features a micron rating of 65 and a service life of 100,000 miles

Part Number: WF2187

Coolant filtration is proven to reduce wear and to maintain all cooling system components. WF2187 water filters can improve performance and extend coolant service life for Detroit Diesel Engines.
