Our commitment to technology helps keep you going. We offer an extensive line of hydraulic filtration products for medium and low-duty applications. We also offer a comprehensive replacement hydraulic filter line for many competitive filter part numbers.

Through the right choice of filter media, our Cummins Filtration brand hydraulic filtration products achieve higher efficiency and dust capacity with lower pressure-drop characteristics than the competition. This prolongs component life, which saves you money in the long run.

The proper oil-cleanliness level for critical clearances on components in the hydraulic fluid stream is the key. Our state-of-the-art facilities enable us to perform multi-pass, pressure-drop, flow-fatigue and hydrostatic burst testing.
