

There is (always) something in the Air

Check Out Our Wide Range Of Cabin Air Filters For **European TRUCK** Applications

CABIN AIR FILTERS - NOT A LUXURY !

It has become universal that today's commercial vehicles are equipped with a sophisticated Air Conditioning system. These systems assure that the Air in the passenger compartment of any given vehicle is heated/cooled, ventilated and appropriately filtered. From a Health & Safety point of view this is critical to improve the thermal comfort and to protect passengers/ drivers from any particles and contaminants that are harmful or may lead to an allergic reaction.

While passenger cars or truck cabins are usually equipped with only a single cabin Air Filter, air conditioning systems for an articulated bus or a luxury coach contain up to 10 (!) Cabin Air filters associated to the system.

FLEETGUARD - FIRST CHOICE FOR CUSTOMERS

Cummins Filtration offers a wide range of Cabin Air Filters in both standard and activated carbon quality. For leading European truck OEM's (from Euro IV to EURO VI applications) as well as for the most popular manufacturers of integrated Air conditioning systems used in buses and coaches (Webasto, Konveкта), Fleetguard Cabin Air Filters are the 1st choice for customers.

ONE OF THE BEST WARRANTIES IN THE INDUSTRY

The Cummins Filtration Warranty extends to our entire line of products, ensuring the same promise of performance and coverage beyond the competition. Visit cumminsfiltration.com to learn more about the competitive benefits of the Cummins Filtration Warranty.
