Why is Cabin Air Filtration Important?

The cab of a vehicle is the operator’s work environment. Hours behind the wheel or riding in the cab each day means you are breathing in the air from a variety of outside conditions such as traffic emissions, smog and even allergens like pollen and dust. Clean air in the cab means a clean work environment, and breathing cleaner air can lead to longer and more productive working hours.

Benefits of Using Fleetguard Cabin Air Filters:

- Effectively removes dust, soot, smog, pollen, mold spores, mildew, pet dander, fumes, and other allergens from the outside air before entering the cab
- Recirculated air in the cab also passes through the cabin air filter
- Reduces stress on cabin HVAC fans and motors when regularly serviced
- Maintenance/Service requirements are easy to perform and cost effective
- Meets OEM specifications
Best Practices

- Follow the OEM recommended service and repair guidelines for all maintenance
- Follow all OEM recommended safety guidelines when performing maintenance
- Cabin air filter replacement guidelines vary by OEM, but many fleets recommend and practice changing filters twice per year

The Best Warranty in the Business.

When you buy a Cummins Filtration product, you are assured superior warranty protection from the point of purchase throughout the recommended life of the product. Unlike industry competitors, our warranty coverage is not pro-rated, which means you are fully protected through the recommended service life of the product.
