**Spend Less.**

Yield More.

All it takes is one coolant leak inside the block to lead to lower fuel economy, problems with emissions systems, and even complete engine failure. You end up spending hard earned money on repairs in addition to losses from downtime. Avoid these expensive cooling system issues by using Fleetguard Antifreeze/Coolants and our complete line of testing products.

**Busts** the Dust.

The Fleetguard OptiAir™ Filter optimizes the pleat spacing and depth of the filter element, increasing the effective media area over conventional radial seal designs. This extra area traps more contaminants, resulting in greater capacity and longer filter life. With an increased outlet area of 60%, OptiAir elements can handle higher flow rates and lower restriction, doing the work of other filters in less space.

**Captures** More Contaminants.

A replacement engine for a tractor can run $20,000 to $30,000 or more! That's a big expense that can be avoided. Save your engine by capturing up to 3x more contaminants than full synthetic filters including metal shards, rust and dust by using our full line of innovative Fleetguard Lube Products.

Eliminate up to **3X** more contaminants in Lube Systems

**PATENTED TECHNOLOGY HOLDS UP IN THE FIELD**

**40%**

of engine repair costs are related to problems that originate in the cooling system
